

READ ME DOCUMENT FOR DATA REPLICATION FILE MATERIALS

*“Confirmation Dynamics: Differential Vetting
in the Appointment of U.S. Federal Agency Leaders”
(George A. Krause and Jason S. Byers)
Journal of Politics (Forthcoming)*

NOTES: These Data Replication Materials (DRMs) include all relevant database, program, output, and graphics files appearing in either the article or in the Online Appendix.

Please note, we *do not* include the file content for intermediary procedural steps in the Stata program code (e.g., **EXCEL** workbook files and individual graphs that are subsequently combined using “*gr combine*” function within Stata). These omissions should not hinder replicability since these files are embedded in the program code that produces the output and graphics of interest.

In addition, In both **Appendices H & I** programs, we only create graphics for “alternative” sets of models appearing in the bottom panel of graphs for each figure – the top panel figures are simply those from the corresponding manuscript program, output, and graphics files appearing in Figures 2, 3, & 4 from the article manuscript.
